

LionPATH tips for Faculty to more easily download and print a class roster

The LionPATH Development and Maintenance Organization is pleased to be able to offer an improved class roster for faculty and staff. If you are experiencing issues when downloading or printing the class roster, the below tips can help troubleshoot the process.

Tips for downloading a class roster from LionPATH to an Excel file:

- Ensure your popups are enabled in your browser. To enable popups, go to the Settings or Options menus depending on the browser you are using.

Tips for printing a class roster in LionPATH:

- **In Chrome:** Click on the Printer Friendly Version link at the bottom of the class roster, then right click to enable the menu and select Print (or CTRL+P) to print the page. The font size of the printed roster is small. Firefox may be a better browser for printing.
- **In Firefox:** Click on the Printer Friendly Version link at the bottom of the class roster, then right click to enable the menu and select This Frame, then select Print Frame to print the page. Using the Printer Friendly Version is recommended over printing from the menu. Firefox prints the roster in a more legible font size.
- More information is available about [Troubleshooting Web Page Printing](#) and other [Faculty Help Topics](#) on the [LionPATH Support website](#).

If you are still encountering problems with LionPATH, please [submit a request for help](#) and the appropriate person will contact you.

This information is provided by the LionPATH Development and Maintenance Organization which is part of the Enterprise Project Management Office at The Pennsylvania State University.
